

Abrasive belts for laquer-sanding

They achieve outstanding sanding results and excellent surface quality by combining several key assets – a controlled coating process, belt joints that are individually matched to the application and the abrasive backing, and antistatic properties based on an innovative production process.

No matter whether you're removing paint, intermediate-sanding of varnish or dull-finishing of fine surfaces, LACMASTER is the ideal coated abrasives. Highly adaptable and flexible, LACMASTER makes working in the tightest curves and profiles easy and efficient. Its three-dimensional structure minimizes clogging and maximizes the life of the LACMASTER abrasives.

**Intermediate laquer sanding,
applying oils and waxes,
paint stripping**

**Removal of paint overspray,
polishing oils and waxes**

**Light dulling, final treatment of
edges and curves in solid surfaces**
